

Digital Forensics - Lab Checklists

VMs Hashes:

4e8cd6450006761aa80f9b8da166b8fc – WIN11-FOR-3-7-2026.zip

4490798267302dc4d3500156005a8e6d – SIFT-3-7-2026.zip

VMs and tools extraction password:

kYk@#\$&k9komCVN%\$#1',4\$11111111

Lab tutorials PDFs password:

DigitiaL_FOR_Summer2026@Abha

Hardware/Tools:

- 2 USB storage (for Lab 2, to simulate live acquisition. You can still perform the lab with 1 USB):
 - 4 GiB USB_A for the Portable Acquisition Tools
 - 64 GiB USB_B to store the acquired data
- Intel x64 -based laptop

Checklist:

- Download and install VMware Pro (available for free ¹)
- A minimum of 100 GiB free space in the Host machine
- Download Windows VM, SIFT VM and “Portable Acquisition Tools”
 - Also extract each individual zip file in USB_A
- Verify Hashes of the downloaded files
- Extract “Portable Acquisition Tools” into the USB_A
 - **DON'T use widows built-in ZIP extraction tool**, it might cause some issues / ignore some files.
 - To avoid this, **USE 7-ZIP for tools extraction.**
- Extract and run VMs
 - When running VMs for the 1st time, select “I copied it”
 - **SIFT Password:** forensics **Windows Password:** training
 - Ensure Windows 11 evaluation period still active. It should last about 60 days from 12 July
 - Refresh desktop to check the remaining days of the evaluation period
 - **DON'T CONNECT VMS TO THE INTERNET OR PUBLIC WIFI**
- Create virtual network in VMware and connect the 2 VMs to it.
- **Both VMs must be connected to isolated virtual network all time.**
- Take snapshot for each VM before using it
 - Snapshots allow us to revert back to the good system state to repeat tasks or to fix any problems
- Check connectivity between them
 - In Windows ping 7.7.7.7
 - In SIFT Ping 7.7.7.11
- If you don't get any reply, check your configurations.
 - Windows network configuration:
 - IP Address: 7.7.7.11
 - Netmask: 255.255.255.0
 - Default Gateway: 7.7.7.7
 - Preferred DNS Server: 7.7.7.7
 - Linux network configuration
 - IP Address: 7.7.7.7/24
 - Netmask: 255.255.255.0
